## Lab 2: Version Control

For this project, the version control system I utilized was GitHub. The main reason I chose GitHub is because it is the only version control system, I have experience with. In addition, GitHub is very easy to use, very widely used across the industry, very easy to collaborate on projects in, and integrates very well with multiple different cloud services such as Google and Amazon. However, because of the wide accessibility to your source code that Git allows, it does have the potential for security breaches. Additionally, because it is cloud based, Git is highly dependent on internet connection and server traffic.

For proof that I used GitHub, I will provide a link to my repository for this project as well as a screenshots of my commits below:
